

Cushion Tire Forklift Attachments

Cushion Tire Forklift Attachment - Cushion tires are a solid tire with a smooth profile. Its' tread is bonded to a steel ring to be able to shape the tire, and the tire is pressed onto a hub which is affixed to the forklift. These types of tires are perfect to use in smooth floor warehouses and are available in various polyurethane or rubber compounds.

Consisting of polyurethane, a poly tire is a really solid tire. These types of tires are utilized rather than cushion tires when there is a higher load capacity than could be attained with a cushion tire and such applications that require a lower steering effort. Poly tires available in a range of hardness ratings so as to meet other specific application requirements. Orderpicker lift trucks and Narrow Aisle models would normally use small diameter poly tires for their outrigger load wheels.
