

Forklift Fork Positioner

Forklift Fork Positioner - The fork positioner is actually a hydraulic apparatus which can allow the person driving to be able to operate the forklift without leaving the seat. They are constructed out of top quality materials and are designed to be able to endure the most challenging procedures and work surroundings. Side shifting models have the extra ability to laterally position the entire load or the arms in order to facilitate much more precise lifting and position in a faster and more effective method.

The only one of its kind blade pocket design enables the one operating it to safely swing the unit's blades without any fear of damaging the positioning cylinders. This can allow the operator the alternative to either execute independent or simultaneous blade movement, depending on the job requirement. For most lift trucks with non-OEM carriages, complete carriages are required. Standard OEM carriages can be transformed into fork positioners on available units.
